## **AMENDMENTS TO THE CLAIMS**

This listing of claims will replace all prior versions and listings of claims in the application:

## LISTING OF CLAIMS:

- 1. (currently amended): A semiconductor device comprising:
- an insulating underlayer;
- a first insulating interlayer formed on said insulating underlayer, said first insulating interlayer having a groove;
  - a first silicon-diffused metal layer including no carbon therein buried in said groove; and
- a first metal diffusion barrier layer formed on said first silicon-diffused metal layer and said first insulating interlayer.
- 2. (original): The device as set forth in claim 1, wherein said first insulating interlayer comprises at least one of a SiO<sub>2</sub> layer, a SiCN layer, a SiC layer, a SiOC layer and a low-k material layer.
- 3. (original): The device as set forth in claim 2, wherein said low-k material layer comprises one of a ladder-type hydrogen siloxane layer and a porous ladder-type hydrogen siloxane layer.

- 4. (original): The device as set forth in claim 3, wherein said ladder-type hydrogen siloxane layer comprises an L-OxTM layer.
- 5. (original): The device as set forth in claim 3, wherein said ladder-type hydrogen siloxane layer has a density of about 1.50 g/cm<sup>3</sup> to 1.58 g/cm<sup>3</sup>.
- 6. (original): The device as set forth in claim 3, wherein said ladder-type hydrogen siloxane layer has a refractive index of about 1.38 to 1.40 at a wavelength of about 633 nm.
- 7. (original): The device as set forth in claim 3, further comprising a mask insulating layer made of silicon dioxide formed on the one of said ladder-type hydrogen siloxane layer and said porous ladder-type hydrogen siloxane layer.
- 8. (original): The device as set forth in claim 1, wherein said first silicon-diffused metal layer has a larger silicon concentration near an upper side thereof than near a lower side thereof.
- 9. (original): The device as set forth in claim 1, wherein said first silicon-diffused metal layer comprises a silicon-diffused copper layer.
- 10. (original): The device as set forth in claim 9, wherein a silicon component of said silicon-diffused copper layer is less than 8 atoms %.

- 11. (original): The device as set forth in claim 1, wherein said first silicon-diffused metal layer comprises a silicon-diffused copper alloy layer including at least one of Al, Ag, W, Mg, Fe, Ni, Zn, Pd, Cd, Au, Hg, Be, Pt, Zr, Ti and Sn.
- 12. (previously presented): The device as set forth in claim 1, wherein said first silicondiffused metal layer includes no metal silicide formed thereon.
- 13. (original): The device as set forth in claim 1, wherein said first silicon-diffused metal layer includes hydrogen.
  - 14. (canceled).
- 15. (original): The device as set forth in claim 1, wherein said first metal diffusion barrier layer comprises at least one of a SiCN layer, a SiC layer, a SiOC layer and an organic material layer.
- 16. (original): The device as set forth in claim 1, further comprising a first etching stopper between said insulating underlayer and said first insulating interlayer.
- 17. (original): The device as set forth in claim 16, wherein said first etching stopper comprises at least one of a SiCN layer, a SiC layer, a SiOC layer and an organic material layer.

Claims 18-50 (canceled).

51. (currently amended): A semiconductor device comprising:

an insulating underlayer;

an insulating interlayer formed on said insulating underlayer, said insulating interlayer having a groove;

a barrier metal layer made of at least one of Ta, TaN, Ti, TiN, TaSiN and TiSiN formed within said groove;

a silicon-diffused copper layer including no copper silicide formed thereon and including no carbon therein and buried in said groove on said barrier metal layer, said silicon-diffused copper layer having a silicon component of less than 8 atoms %; and

a copper diffusion barrier layer made of at least one of SiCN, SiC, SiOC and organic material and formed on said silicon-diffused copper layer and said insulating interlayer.

Claims 52-212 (canceled).

- 213. (previously presented): The device as set forth in claim 1, wherein silicon is diffused into the entirety of said first-silicon diffused metal layer.
  - 214. (previously presented): A semiconductor device comprising: an insulating underlayer;

an insulating interlayer formed on said insulating under layer, said insulating interlayer having a groove;

a silicon-diffused metal layer buried in said groove; and

a metal diffusion barrier layer formed on said silicon-diffused metal layer and said insulating interlayer,

upper surface portions of said insulating interlayer and said silicon-diffused metal layer being nitrided.

215. (new): A semiconductor device comprising:

an insulating underlayer;

a first insulating interlayer formed on said insulating underlayer, said first insulating interlayer having a groove;

a first silicon-diffused metal layer including no carbon therein buried in said groove; and

a first metal diffusion barrier layer formed on said first silicon-diffused metal layer and said first insulating interlayer,

wherein said first silicon-diffused metal layer has a larger silicon concentration near an upper side thereof than near a lower side thereof.

216. (new): A semiconductor device comprising:

an insulating underlayer;

- a first insulating interlayer formed on said insulating underlayer, said first insulating interlayer having a groove;
  - a first silicon-diffused metal layer including no carbon therein buried in said groove; and
- a first metal diffusion barrier layer formed on said first silicon-diffused metal layer and said first insulating interlayer,

wherein said first metal diffusion barrier layer comprises at least one of a SiCN layer, a SiC layer, a SiOC layer and an organic material layer.

- 217. (new): A semiconductor device comprising:
- an insulating underlayer;
- a first insulating interlayer formed on said insulating underlayer, said first insulating interlayer having a groove;
  - a first silicon-diffused metal layer including no carbon therein buried in said groove; and
- a first metal diffusion barrier layer formed on said first silicon-diffused metal layer and said first insulating interlayer,

further comprising a first etching stopper between said insulating underlayer and said first insulating interlayer.

- 218. (new): A semiconductor device comprising:
- an insulating underlayer;

- a first insulating interlayer formed on said insulating underlayer, said first insulating interlayer having a groove;
  - a first silicon-diffused metal layer including no carbon therein buried in said groove; and
- a first metal diffusion barrier layer formed on said first silicon-diffused metal layer and said first insulating interlayer,

wherein said first etching stopper comprises at least one of a SiCN layer, a SiC layer, a SiOC layer and an organic material layer.
